Contents

- Performance Analysis (Android)
- Usage (Android)
- Exception Handling (Android)
- Check The File Structure (iOS)
- Convert Images to WebP Format (iOS)
- Put Assets Into Xcode (iOS)

Android : Simple Performance Analysis

Lottie has better performance and resolution than GIF.

These 2 images show the same animation in AE but exported as different formats.

We can see GIF uses much more CPU and RAM than Lottie.

GIF

Lottie

Android (lottie 3.4.4)

Step 1 - File Check

1. It can be a JSON file like `lottie_animation.json`
2. Or a ZIP file like `lottie_animation.zip`

We can validate the file by submitting it to <https://lottiefiles.com/>

```
lottie_animation.zip
+ images (optional dir)
  + image_01.png
+ lottie_filename (dir)
  + lottie_filename.json
```

Android (lottie 3.4.4)

Step 2 - Importing

As assets :

- Put the file under [/grindr-3.0-android/core/src/main/assets](#)

And use it like

```
<com.airbnb.lottie.LottieAnimationView
    style="@style/Debug"
    android:layout_width="32dp"
    android:layout_height="32dp"
    app:lottie_autoPlay="true"
    app:lottie_fileName="storepage_xtra_explore_android.json"
    app:lottie_loop="true" />
```

As resources :

- Put the file under [/grindr-3.0-android/core/src/main/res/raw](#)

And use it like

```
<com.airbnb.lottie.LottieAnimationView
    android:id="@+id/audio_call_loading_view"
    android:layout_width="wrap_content"
    android:layout_height="50dp"
    android:layout_marginTop="8dp"
    app:lottie_autoPlay="true"
    app:lottie_loop="true"
    app:lottie_rawRes="@raw/audio_call_loading_points" />
```

Android (lottie 3.4.4)

Step 2 - Importing (Programmatically)

As assets :

- Put the file under [/grindr-3.0-android/core/src/main/assets](#)

And use it like

```
LottieAnimationView(context).apply {
    setAnimation(itemType.lottieAsset)
    repeatCount = ValueAnimator.INFINITE
    playAnimation()
    setPadding(.....)
    layoutParams = LayoutParams(MATCH_PARENT, logoHeight).apply {
        setMargins(.....)
    }
}
```

Android (lottie 3.4.4)

Exception Handling

```
java.lang.IllegalStateException: Unable to parse composition
    at com.airbnb.lottie.LottieAnimationView$2.onResult (LottieAnimationView.java:75)
    at com.airbnb.lottie.LottieAnimationView$2.onResult (LottieAnimationView.java:73)
    at com.airbnb.lottie.LottieTask.notifyFailureListeners (LottieTask.java:158)
    at com.airbnb.lottie.LottieTask.access$200 (LottieTask.java:27)
    ...
Caused by: java.lang.ArrayIndexOutOfBoundsException: length=4; index=4
    at com.airbnb.lottie.parser.LayerParser.parse (LayerParser.java:135)
    at com.airbnb.lottie.parser.LottieCompositionMoshiParser.parseLayers (LottieCompositionMoshiParser.java:121)
    at com.airbnb.lottie.parser.LottieCompositionMoshiParser.parse (LottieCompositionMoshiParser.java:87)
    at com.airbnb.lottie.LottieCompositionFactory.fromJsonReaderSyncInternal (LottieCompositionFactory.java:262)
    at com.airbnb.lottie.LottieCompositionFactory.fromJsonReaderSync (LottieCompositionFactory.java:255)
```

Reason : <https://github.com/airbnb/lottie-android/issues/1633>

AndriidLottie does not support luma inverted matte for now.

Solution :

Can't resolve it with codes. Kindly ask designer to use a layer instead of matte.

(不支援遮罩, 要覆蓋得用圖層)

Android (lottie 3.4.4)

Exception Handling

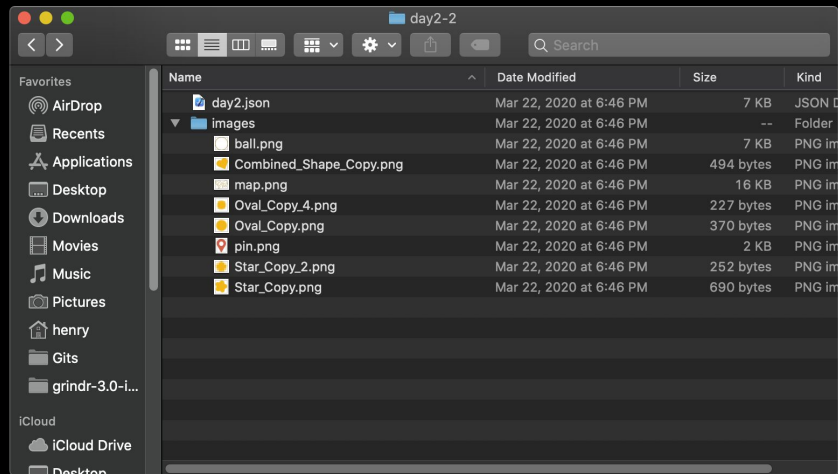

```
java.lang.IllegalStateException: Unable to parse composition
    at com.airbnb.lottie.LottieAnimationView$1.onResult (LottieAnimationView.java:76)
    at com.airbnb.lottie.LottieAnimationView$1.onResult (LottieAnimationView.java:69)
    at com.airbnb.lottie.LottieAnimationView$3.onResult (LottieAnimationView.java:93)
    at com.airbnb.lottie.LottieAnimationView$3.onResult (LottieAnimationView.java:86)
    at com.airbnb.lottie.LottieTask.notifyFailureListeners (LottieTask.java:158)
    at com.airbnb.lottie.LottieTask.access$200 (LottieTask.java:27)
    ...
Caused by: java.lang.IllegalStateException: There is no image for data:image/png;base64,iVBORw0KGgoAAAANSUHEUgAA...
```

Solution :

Try to submit the file to lottie online preview. If it's valid, use the [json](#) file directly instead of the [zip](#) file.

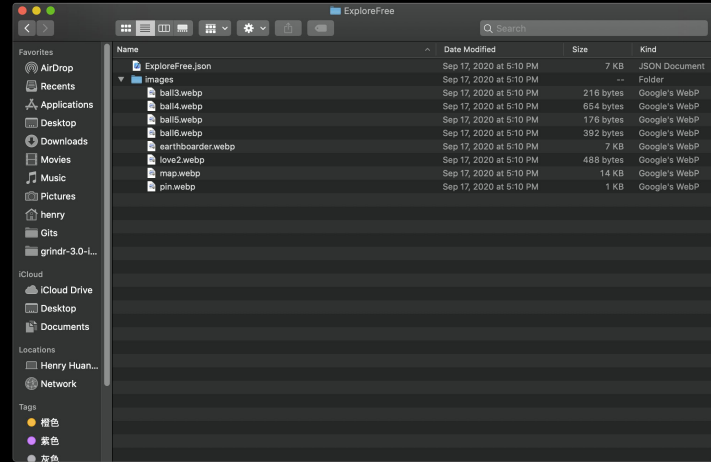

iOS Step 1 - Check the file structure

1. For every Lottie asset, you will have a json file and a images folder(optional).
2. If you don't see the images folder, skip to Step 3.

iOS Step 2 - Convert images to WebP Format

1. Convert all the images in images folder into WebP with <https://webp-converter.com>
(Choose quality to 100 in the options setting)
2. Replace old image files under image folder with new converted WebP images.

Well done!

Developer
